IP PROTECTION

IP Protection Codes outline a fixture's resilience to solids and liquids, using a two-digit prefix. The first digit safeguards against solid penetration and live component contact, while the second digit shields against liquid ingress.

IP	20	Protects against solids >12mm, no defense against water.
IP	40	Shields from solids >1mm, water remains unchecked.
IP	43	Guards against solids >1mm and falling rain.
IP	44	Resists solids >1mm and water splashes from all sides.
IP	54	Defends against dust and water splashes on all sides.
IP	55	Shields against dust and water jets from every direction.
IP	64	Protects against dust and water splashes from all sides.
IP	65	Guards against dust and water jets from all angles.
IP	67	Dust-tight, withstands temporary immersion effects.
IP	68	Unaffected by water splashes from any direction.
